

How to schedule the script using Task Scheduler.

- Save file with .bat extension. Make sure to enter the correct address of the python script and python executable file.

```
"C:\Program Files\Python312\python.exe" "D:\USER DATA\Desktop\Web Scrapping\Automating KPI Dashboard\kpi_dashboard.py"  
pause
```

- Open Task Scheduler on windows and schedule a Task. For this I am scheduling a task on a weekly basis.

- At your chosen time, your script will execute.
